

ANSCOMBE'S QUARTET

24/04/26

Below are four sets of bivariate data. Find, for all four sets (it is fine to work in groups) the following summary statistics and comment on what you notice:

Mean of x and y , variance of x and y and the pmcc of each set.

The pmcc formula is:

$$r_{xy} = \frac{\sum_{i=1}^n (x_i - \bar{x})(y_i - \bar{y})}{\sqrt{\sum_{i=1}^n (x_i - \bar{x})^2} \sqrt{\sum_{i=1}^n (y_i - \bar{y})^2}}$$

A (very often easier) alternative formula is:

$$r_{xy} = \frac{n \sum x_i y_i - \sum x_i \sum y_i}{\sqrt{n \sum x_i^2 - (\sum x_i)^2} \sqrt{n \sum y_i^2 - (\sum y_i)^2}},$$
