

INCLINED PLANES INTRODUCTORY EXAMPLES

07/01/26

1. A particle slides down a smooth inclined plane. Find:
 - i. the quantity indicated; and
 - ii. the magnitude of the normal reaction between the particle and the plane.

2. A particle of mass 5 kg moves on a smooth inclined plane under the action of a single force. In each case find:
 - i. acceleration of the particle, specifying whether it is up or down the plane;
 - ii. the magnitude of the normal reaction between the plane and the particle.

3. A ball bearing is travelling at a speed of $10\sqrt{2} \text{ ms}^{-1}$ when it starts to move up a smooth plane inclined at 45° above the horizontal. Find the distance it travels up the plane before it first comes to rest.
